

If you want to have snow flurries on a city street "block" you need machines on both sides every 15 feet offset. Disney Main Street USA uses Our T 1000.

X <---15FT---> X <---15FT---> X <---15FT---> X

X <---15FT---> X <---15FT---> X <---15FT---> X

<-----100 FT Block ----->

X= Snow Machine

<---15FT---> = Distance between machines on Lamp posts or Roof tops

If a city block is 100 ft long you will need 8 snow machines min. That's 6 dedicated 20 amps circuits which equals 160 amps. Preferred electric not shared.

You can snow an intersection snow zone with T 1500 snow machines on each of the 4 Connors of the intersection.
